Subject: FWD: Pick of the litter

These were pictures that Peter Walker took this morning of a Whooping and a Sandhill Crane (both juveniles) and a few other birds. They were seen yesterday by a crane hunter and reported about 3:30 p.m. to the Area Wildlife office in Brush. Peter and I and the DOW area Biologist found them just before daybreak. We continued watching and photographing until they flew away about 7:45 a.m. Heading east south east. They may be back this evening unless they take off with a large flock of sandhills. They were located on a Playa pond about 17 miles east of Last chance and 2 west of Anton on the north side of Hwy 36.
